## CONCRETE CHUTE SAFETY

While we are pouring concrete on Brieser job-site

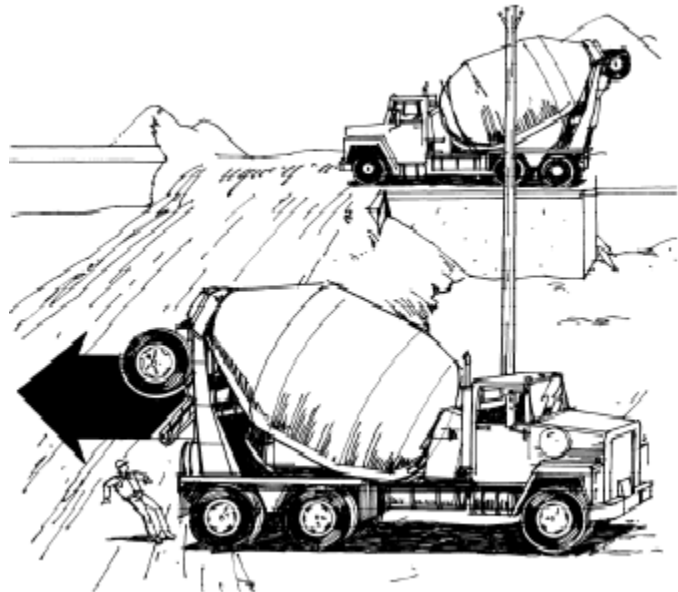

### Stay clear of chutes

Never stand or work around or under the chutes on our trucks. Even an empty chute is very heavy. Understand that they move quickly and can collapse. Additional temporary chutes must be properly

braced to prevent collapse. Bracing equipment may not be carried on the chutes of the delivery truck. The flip down chute presents a very serious pinch point when dropped into position. Keep hands away from the pinch point between the main chute and the flip down chute.

### Stay clear of the truck

A fully loaded ready mix concrete truck may weigh up to 36 tons. It can easily crush you. On site delivery of our job-sites may require truck movement, so stay back. It is important to maintain communication with driver of the truck during the entire delivery. Don't assume that the operator can see you, there are multiple blind spots around the truck – even back as far as 75 feet immediately behind the truck.

### Position the mixer correctly

Discuss the what, where, how and why with the driver upon arrival to the delivery site. Front discharge trucks are known for their ability to agilely maneuver into the delivery area, but work with the driver to avoid overhead and underground utilities that can be damaged by the truck. National Electrical Code specifies overhead lines be 15-1/2' in the air. The truck should be no closer than one foot for every foot of depth to a trench or excavated area. The truck must always be positioned perpendicular to the delivery area excavation. When the truck is moving into position at a trench or excavation make sure all personnel are clear from area until truck is stopped and in position.

### Assist the driver with directions and obstructions

When the delivery has been completed, assist the driver in leaving the site. Remember the huge blind spot to the rear of the truck.

### Do not climb on trucks

The driver should make all adjustments needed during the delivery.

### Don't try to catch concrete

Concrete is very heavy. Let it hit the ground or the mechanism you are using to move it.

### Do not expose your skin or eyes to fresh concrete

Minimize contact with freshly mixed, unhardened concrete. Freshly mixed concrete can cause skin burns and irritation to the eyes. Avoid contact with freshly mixed, unhardened concrete by wearing long sleeves, long pants, gloves, boots and eye protection. Wash exposed areas with soap and water immediately. Flush eyes with copious amounts of water if they are splashed with concrete. Saturated or contaminated clothing should be removed and washed before re-use.

### Important Notice

*This Safety Training Topic (STT) does not necessarily cover all possible hazards associated with this equipment and should be used in conjunction with equipment manual. It is designed as a guide to be used to compliment training in the field at Brieser Construction and as a reminder to users prior to equipment use.*
