BRIESER CONSTRUCTION COMPANY SITE SAFETY MEETING - TOOL BOX TALK “MONDAYS”

So did you enjoy your weekend? Maybe you had a round of golf on Saturday, and followed it up with a few drinks afterward. Next you are sleeping in on Sunday morning to catch up on some zzzz's. Now you find yourself staying up a little bit longer on Sunday night watching the big football game.

Wow! That alarm clock comes early. Welcome to Monday morning. Time to get the cobwebs out of your eyes and get focused on the new week ahead of us. Statistics have shown that Monday is the day you are most likely to be injured at work.

Work place injuries are 20% more common on Monday than any other day of the week. Lack of sleep over the weekend and the lingering effects of alcohol are contributing factors to increased work place incidents. Now, if you put that in conjunction with the fact that construction ranks 3rd in the number of work related injuries, behind only Mining, and Agriculture. Now, we have a recipe for disaster.

However, these statistics are not the only things against us this morning. Weather plays a great factor with it. Did it rain this past weekend? What about the wind? Where there other trades on the job? How did they leave the job site?

So let's take the time to regroup! Think about everything involved in our job for the day. Complete a thorough "TSTI" Walk down the job site to ensure that conditions are safe and up to our standards. Let's get through this day SAFELY, so we can return to our families tonight and eventually make it to another weekend.
